PRESS RELEASE

FOR IMMEDIATE RELEASE:

INTRODUCING PERSPECTIVE VERSION 2.0 featuring case management, email notifications, and improved reporting and search capabilities.

Edmonton, Alberta, Canada—June 8, 2009—PPM 2000, the leading developer of Incident Reporting & Investigation Management software for corporate security, safety and risk management, announced today the release of Perspective Version 2.0. This latest version of the company's flagship application features case management functionality, email notifications, improved reporting and search capabilities and several other enhancements.

With the addition of case management, Perspective now offers investigators the ability to manage their workloads more effectively by grouping related incidents, and investigations, into a single case for comprehensive review. This allows for consolidation of incident data for managing multiple investigations simultaneously, establishing incident, investigation and case links, and quantifying aggregate loss.

Perspective's new email notifications feature (enabled for SMTP or Microsoft® Outlook® integration) allows users to email key incident or case details directly from an incident or case record for immediate attention. This feature can also be used to notify investigators of their assigned investigations, to alert users of new assignments (and of modifications to existing ones), and to inform supervisors that assignments have been completed, thereby facilitating communication and enhancing organizational workflow.

Additionally, over 30 enhancements have been made to the core software, including redesigned reports, new search capabilities, an updated interface, advanced assignments functionality, additional fields and new navigation and display features. Don Murphy, President & CEO of PPM 2000, remarked, "We are extremely pleased with the features and functionality that have been incorporated in Perspective Version 2.0. With these enhancements, Perspective takes investigation and case management to the next level and further sets itself apart from the other incident reporting solutions available on the market. We recognize that Perspective is an integral part of our clients' security operations, and this latest release is a direct result of listening to their needs and wants."

About Perspective by PPM 2000:

Track. Analyze. Report... PREVENT. With Perspective by PPM 2000, organizations benefit from a single enterprise platform to capture and report data relative to incident, investigation and case management. Users can intelligently action and query their data for trending, risk mitigation and planning activities. Then, with the ability to accurately assess what is happening and its potential impact, they can make informed decisions that optimize performance and illustrate the effectiveness of their security operation.

About PPM 2000 Inc.:

PPM 2000 Inc. was established in 1988 to develop Incident Reporting & Investigation Management software for the corporate security industry. The company's enterprise-level solutions help organizations accomplish their security, risk management and compliance objectives through data-driven decision making and knowledge management. Thousands of organizations have implemented a PPM solution, and the company's clients span all industries and include many of the Fortune 1000. PPM 2000 is a Microsoft Gold Certified Partner.
